

Claims:

1. A connection coupling for transferring gaseous and/or liquid fluids, especially for filling gas tanks of motor vehicles, comprising a sliding sleeve (18) for locking connecting profile sections, especially collet chucks (15), characterized in that a data interface, especially a data transmitter (60), is arranged on the sliding sleeve (18).
2. A connection coupling according to claim 1, characterized in that the data transmitter (60) is fastened and in particular glued to the circumferential surface of the sliding sleeve (18).
3. A connection coupling according to claim 1 or 2, characterized in that a protective tube (62) is arranged between the front housing part (11a) and the rear housing part (11c) of the connection coupling (10).
4. A connection coupling according to one of the claims 1 to 3, characterized in that the data transmitter (60) comprises a data line (61) which can be connected with a fluid line (12').
5. A connection coupling according to claim 3 and 4, characterized in that the data line (61) is guided in the protective tube (62) parallel to the housing (11).
6. A connection coupling according to one of the claims 1 to 5, characterized in that the data transmitter (60) is provided with a ring-like configuration and is arranged around the sliding sleeve (18).
7. A connection coupling according to claim 6, characterized in that the data transmitter (60) is shrunk onto the sliding sleeve (18).
8. A connection coupling at least according to claim 1, characterized in that the data transmitter (60) is embedded in a covering of the sliding sleeve (18).
9. A connection coupling according to one of the claims 1 to 8, characterized in that the data transmitter (60) is arranged as a transponder.
